Principal Engineer / Architect - GenAI, LLM Agents, RAG | .NET and Cloud-Native Platforms

SUMMARY

Hands-on principal engineer and architect with 18+ years building production software, the last four spent implementing GenAI systems: LLM agents with multi-step orchestration, RAG pipelines over vector search, and the evaluation and observability that make non-deterministic behaviour trustworthy in production. Ships code daily across LangChain/LangGraph and TypeScript/Next.js services, .NET APIs on Azure, and Python for AI work, on cloud-native platforms (AWS EKS, Azure) in regulated payments environments. Also leads: hiring, coaching and performance management, architecture and design reviews, and cross-border delivery for US enterprise accounts.

CORE SKILLS

- **GenAI / LLM:** LLM agents, multi-agent orchestration (LangGraph), tool and function calling, RAG, embeddings and vector search (Pinecone), prompt engineering, structured outputs, multi-model routing, model evaluation, agent tracing and observability (LangSmith), guardrails, Model Context Protocol (MCP) integrations, conversational AI, Azure AI Studio, LangChain
- **Languages:** TypeScript, JavaScript, C#, Python, SQL, Java
- **Frameworks:** Next.js, React, React Native, Node.js, .NET / ASP.NET, GraphQL / Apollo, REST APIs, iOS and Android delivery
- **Cloud and Platform Engineering:** AWS (EKS, EC2, S3), Azure, Kubernetes, containers, MongoDB Atlas, SQL Server, CI/CD pipelines, observability, security hardening (PCI DSS, SOC 2)
- **Engineering Leadership:** architecture and design reviews, hiring, coaching and performance management, delivery KPIs and quality metrics, cross-border and offshore delivery, stakeholder management

PROFESSIONAL EXPERIENCE

Fast Party (fastparty.ai) - Tech Co-Founder | Hyderabad, India | Jan 2024 - Present

- Architected and shipped an AI-native, cloud-native SaaS platform across iOS, Android and Web on Next.js/React, React Native, Node.js, MongoDB Atlas and AWS EKS, with GraphQL/Apollo APIs.
- Built Antsy, a production conversational AI concierge: stateful multi-step agent graphs in LangChain/LangGraph with tool calling and RAG over event data, and monitored and calibrated its behaviour with LangSmith tracing, latency and token-cost tracking, and regression evals against curated datasets before each release.
- Led the ChatGPT Model Context Protocol (MCP) server integration in TypeScript - among the first event platforms live in ChatGPT via MCP.
- Led the engineering team's transition to agentic development workflows: spec-driven development with AI coding agents assigned to issues as first-class teammates and run in parallel on multi-step work (feature builds, refactoring, upgrades) - raising delivery velocity while keeping architectural and code-review standards intact. The change was structural rather than cosmetic: as engineers and designers moved on, the roles were not backfilled, and delivery continued on a leaner team.
- Recruited and led a cross-disciplinary team of 12 at its peak (engineering, product and design); partner with Product and UX to translate roadmap into engineering plans, running Agile delivery from planning through release. Led security hardening and root-cause remediation after identifying a targeted RCE vulnerability in production.

Samisen Distributed Technologies - Director and Co-Founder | Hyderabad, India | Aug 2020 - Present

- Built Eventonaut, an AI mobile app that guided users through multi-day conferences: RAG pipeline on LangChain with Pinecone vector search, owning chunking, embedding strategy, retrieval tuning and grounded response quality.
- Architected and delivered an Azure payment gateway processing \$10M+ in monthly transaction volume, with merchant portal, hosted payment pages and background reconciliation services.
- Delivered secure LLM integrations and custom MCP data connectors on Azure AI Studio with C#/.NET for mid-market and enterprise clients in the United States.
- Built a 16-person delivery team from scratch and directed 10+ business-critical deployments, billing \$350K in delivered projects across high-throughput enterprise applications, distributed systems and secure payment processing.
- Reference implementations are public: samisen-io/venue-assistant (MCP server in .NET 10 with xUnit tests) and samisen-io/eventonaut-api (LangChain + Pinecone RAG backend).
- Designed, built and operate **VenueManager** (venuemanager.pro), a live multi-tenant SaaS for venue operators: Next.js/TypeScript on Vercel with Supabase row-level security for tenant isolation, Stripe subscription lifecycle, an Inngest-scheduled vendor-outreach agent on Claude, and 40+ Playwright end-to-end specs including tenant-boundary assertions.

Ungerboeck Software International (now Momentus Technologies) | Jan 2007 - May 2020

Director of Technology / Offshore Delivery Lead | Pune, India | Dec 2019 - May 2020

- Created the India subsidiary and built its team to 12 - recruited the engineering side and converted the existing QA contractors into subsidiary employees; directed cross-border delivery for premier global enterprise accounts, owning roadmap commitments and aligning engineering output to US product standards, with KPI and quality data improving customer satisfaction across critical ERP implementations.

Technical Services Team Lead | St. Louis, MO, USA | Jan 2019 - Oct 2019

- Led, coached and developed a global team of technical consultants delivering ERP integrations, custom multi-tenant applications and reporting engines for 100+ venue and stadium clients worldwide.

Lead Integration Architect | St. Louis, MO, USA | Oct 2015 - Dec 2018

- Owned the architectural vision and technical roadmap for core global payment processing: secure multi-model payment APIs handling high-volume credit card and ACH streams under PCI compliance.
- Architected a resilient AWS-hosted cloud task automation network and integrated webhooks, e-signature (DocuSign) and Twilio communications into core ERP engines.

Earlier at Ungerboeck: Senior Software Engineer (Apr 2012 - Sep 2015) - built scalable ERP payment gateway APIs and e-commerce, CMS and registration modules in .NET. Software Engineer, Web Applications (Jan 2010 - Mar 2012) - delivered membership, exhibition and payments modules, with ASP.NET applications meeting Section 508 accessibility requirements. Software Engineer, ERP (Jan 2007 - Dec 2009) - built service and work order, inventory, event registration and housing modules.

EDUCATION

- MBA, Executive Business Administration - Washington University in St. Louis, Olin Business School, USA
- M.S., Computer Science - University of Missouri, Rolla, USA
- B.S., Electronics and Computer Engineering - Acharya Nagarjuna University, India

CREDENTIALS

- Generative AI for Business - Microsoft Azure OpenAI Program
- TIBCO Scribe Online Certified Level 2
