Director / Associate Director - Engineering | GenAI, LLM Agents, RAG | Platform, Product and Delivery Leadership

SUMMARY

Engineering leader and hands-on architect with 18+ years building and running software organisations that ship. Thirteen years inside a US-headquartered global enterprise (Ungerboeck / Momentus Technologies), ending as Director of Technology with responsibility for cross-border delivery to premier global accounts; then founder-director of two companies that put AI into production. Owns the whole mandate - hiring, coaching and performance management, roadmap and delivery KPIs, architecture and code review, and GenAI implementation (agents, RAG, evaluation) - and still writes code. US-educated (MBA, MS CS) with a decade of leadership in US enterprise delivery.

CORE SKILLS

- **Leadership and Delivery:** team building and hiring, coaching and performance management, roadmap and delivery planning, KPIs and quality metrics, global and offshore delivery, stakeholder and vendor management, budget ownership, Agile delivery
- **GenAI / LLM:** LLM agents, multi-agent orchestration (LangGraph), RAG, embeddings and vector search (Pinecone), evaluation and observability (LangSmith), Model Context Protocol (MCP) integrations, LangChain, Azure AI Studio, multi-model routing, guardrails, conversational AI
- **Architecture and Platforms:** cloud-native architecture (AWS EKS, Azure), microservices and distributed systems, Kubernetes, .NET / C#, TypeScript, Next.js / React, React Native, Node.js, Python, GraphQL and REST APIs, MongoDB Atlas, SQL Server, CI/CD, observability, security hardening (PCI DSS, SOC 2)
- **Languages:** TypeScript, JavaScript, C#, Python, SQL, Java

PROFESSIONAL EXPERIENCE

Fast Party (fastparty.ai) - Co-Founder | Hyderabad, India | Feb 2025 - Present

- Built and lead the engineering function for an AI-native, cloud-native SaaS platform across iOS, Android and Web on Next.js/React, React Native, Node.js, MongoDB Atlas and AWS EKS - building the team from scratch to 12 across engineering, product and design, and owning architecture, delivery and technical standards from zero.
- Set and drove the AI direction: production LLM agents (LangChain/LangGraph multi-step orchestration, tool calling, RAG over event data), the ChatGPT Model Context Protocol (MCP) integration in TypeScript, and LangSmith monitoring, cost tracking and regression evals before release.
- Drove the team's move to agentic development - spec-driven development with AI coding agents as first-class teammates on parallel workstreams - raising delivery velocity while holding review and architectural standards. The team peaked at 12 and was not backfilled on attrition once that model took hold, so delivery continued on a leaner team.
- Partner with Product and UX to turn roadmap into delivery plans, running Agile cycles end to end; led security hardening and root-cause remediation after identifying a targeted RCE vulnerability.

Samisen Distributed Technologies - Director and Co-Founder | Hyderabad, India | Aug 2020 - Present

- Ran a bootstrapped AI and software consultancy end to end: built a 16-person team from scratch, owned client relationships, delivery and budget, and billed \$350K across 10+ business-critical deployments for mid-market and US enterprise clients.
- Architected and delivered an Azure payment gateway processing \$10M+ in monthly transaction volume - merchant portal, hosted payment pages, background reconciliation - with security and compliance ownership.

- Directed product delivery for Eventonaut, an AI conference navigator: RAG on LangChain with Pinecone vector search, owning chunking, embedding strategy and grounded response quality.
- Delivered secure LLM integrations and custom MCP data connectors on Azure AI Studio with C#/.NET.
- Reference implementations are public: samisen-io/venue-assistant (MCP server in .NET 10 with xUnit tests) and samisen-io/eventonaut-api (LangChain + Pinecone RAG backend).

Ungerboeck Software International (now Momentus Technologies) | Jan 2007 - May 2020

Director of Technology / Offshore Delivery Lead | Pune, India | Dec 2019 - May 2020

- Created the India subsidiary and built its team to 12 - recruited the engineering side and converted the existing QA contractors into subsidiary employees; directed cross-border delivery for premier global enterprise accounts, owning roadmap commitments and aligning engineering output to US product standards.
- Built and optimised offshore delivery: engineering utilisation, delivery metrics and quality programmes that improved customer satisfaction across critical ERP implementations.

Technical Services Team Lead | St. Louis, MO, USA | Jan 2019 - Oct 2019

- Led, coached and developed a global team of technical consultants delivering ERP integrations, multi-tenant applications and reporting engines for 100+ venue and stadium clients worldwide.

Lead Integration Architect | St. Louis, MO, USA | Oct 2015 - Dec 2018

- Owned the architectural vision and technical roadmap for core global payment processing: secure multi-model payment APIs handling high-volume credit card and ACH streams under PCI compliance.
- Architected a resilient AWS-hosted cloud task automation network and integrated webhooks, e-signature (DocuSign) and Twilio communications into core ERP engines.

Earlier at Ungerboeck: Senior Software Engineer (Apr 2012 - Sep 2015) - ERP payment gateway APIs and e-commerce, CMS and registration modules in .NET. Software Engineer, Web Applications (Jan 2010 - Mar 2012) - membership, exhibition and payments modules, ASP.NET applications meeting Section 508 accessibility requirements. Software Engineer, ERP (Jan 2007 - Dec 2009) - service and work order, inventory, event registration and housing modules.

EDUCATION

- MBA, Marketing - Washington University in St. Louis, Olin Business School, USA
- M.S., Computer Science - University of Missouri, Rolla, USA
- B.S., Electronics and Computer Engineering - Acharya Nagarjuna University, India

CREDENTIALS

- Generative AI for Business - Microsoft Azure OpenAI Program
- TIBCO Scribe Online Certified Level 2
